

Installation guide

Techwiz Evaluation 3.0.3 / Quick start

10 unique configurations | Unlimited repeat reviews
Works offline. No calendar expiry.

Before you start

Use a Windows computer or test server approved by your organization. Have an administrator available to approve the installation.

1. Install Techwiz

1. Save the installer to your computer and close Techwiz if it is running.
2. Double-click the file below to begin installation.

TechwizEvaluationSetup-3.0.3-SelfContained-x64.msi

3. Have an administrator approve the Windows permission prompt, if shown.
4. Follow any installation prompts and wait for installation to complete. If Windows blocks the installer, ask your IT team for assistance.

2. Open the application

Open **Techwiz Evaluation** from the desktop or Start Menu. A fresh evaluation should show **10 FREE ASSESSMENTS LEFT**. Previous usage may be retained if you have used Techwiz before.

3. Start your evaluation

Click **New assessment**. Select your exported configuration files, choose the benchmarks and report formats you want, and select a folder for the reports. Complete the assessment steps shown in the application. See the user guide for detailed assessment instructions.

How the allowance works

Each new configuration uses one slot. You can rerun the same unchanged configuration as often as you need, using different benchmarks or report formats. Renaming files or changing their order does not use another slot.

Changed configuration contents count as a new configuration. Once all 10 slots are used, you can continue reviewing configurations already counted and access existing reports.

Need help?

If installation or startup fails, send your IT team or support contact the exact error message and your Windows version.

Uninstall

Open Windows **Installed Apps** or **Programs and Features**, select **Techwiz Evaluation** and choose **Uninstall**. Your configuration files and reports are preserved; usage history is normally retained.
